

DIALEX Recruitment Tracker App - One-Page Summary

WHAT IT IS

- A standalone offline browser app for DIALEX sites to track patient screening, notification, and randomization workflow.
- It runs from local HTML, CSS, and JavaScript files and stores data in encrypted local database files.

WHO IT IS FOR

- Hospital dialysis site research staff and site admins (for example coordinators and site PI delegates).

WHAT IT DOES

- Loads and saves encrypted DIALEX database files (.enc); legacy encrypted formats are rejected.
- Uses local username/password sign-in with lockout handling, user roles, and central recovery mode.
- Imports ORRS registration CSV files for bulk intake with automated pre-screening summaries.
- Supports manual patient entry and validation for age, dates, health card format, and duplicate checks.
- Tracks recruitment stages from notification assessment through ready-to-randomize and prescribed states.
- Requires exclusion confirmation before randomization; supports opt-out status/date and Study ID assignment.
- Writes alternating timestamped autosave files plus named import backups, and records events in an audit log.

HOW IT WORKS (REPO EVIDENCE)

- UI layer: single page app (DIALEX Recruitment Tracker App.html) with local CSS and modal-driven workflows.
- Client modules: app-01.js to app-06.js plus app-boot.js handle crypto, auth, autosave, import, filters, and table updates.
- Data layer: in-browser SQLite via sql.js with tables patient_assessments, users, audit_log, study_ids, and site_settings.
- Security service: Web Crypto PBKDF2 + AES-GCM, V2 payload header DIALEX-ENC-V2, with data key wraps for central and per-user unlock.
- Data flow: load .enc file -> decrypt -> hydrate SQLite/session -> import/edit records -> write audit rows -> save/autosave encrypted .enc.
- Remote APIs/services: Not found in repo.

HOW TO RUN (MINIMUM)

- Open DIALEX_Recruitment_Tracker/DIALEX Recruitment Tracker App.html in Google Chrome or Microsoft Edge.
- Click Set save folder and grant read/write permission.
- Click Load database, choose a V2 encrypted .enc file, then sign in.
- If a starter database is needed, use DIALEX_Site_Recruitment_Setup/DIALEX_Site_Recruitment_Setup.html first (creation is disabled in tracker).
